China's Oil Industry and Market - H.H. Wang - 1999-08-09
This authoritative book on China's oil demand and government policies and practices rests on two essential foundations: first and foremost on the author's considerable knowledge of China's oil situation and prospects, together with his access to Chinese energy literature and data; and secondly, on that insight afforded to him and, therefore, his readers from his fluency in Chinese. The author analyzes the Chinese oil market and the rising pressure on Beijing to reform policies which constrain China's ability to meet soaring demand and to pay for crucial imports at a time of growing political and economic uncertainties. Dr Wang acknowledges the importance of China meeting its growing domestic oil demand, if at all possible, through national production. The sheer weight of China's population, and its burgeoning requirements as industrialization spreads into most regions, dwarfs the needs of others and places unprecedented strain on international oil trades. The author stresses the fact that the outcome is hard to define, yet the time required to tackle the nation's energy needs is not limitless. Moreover, he reminds the reader of the perennial difficulty in meeting widely disparate economic and energy needs in different regions of the vast country.

In recent years, China has emerged as the world’s sixth largest oil producer and as Asia’s largest oil exporter. As a result, attention has become increasingly focused on the prospects for the rapidly growing petroleum industry. This is a timely and important book to help enhance understanding of China's petroleum industry and to assess China's energy policy in a more realistic way. Janet Xuanli Liao, The China Journal This is a timely volume. Understanding the oil and gas industry in China at home is an essential prerequisite to understanding Chinese foreign policy and the future role of China in world oil and gas markets. It is certain to be a major one. From the preface by Ron Oxburgh, Lord Oxburgh of Liverpool, (Climate Change Capital) China's rapid economic development is having profound implications for energy resources. China has always been exceptionally reliant on its abundant coal, but consumption of oil and gas has grown rapidly since reform began in the 1980s. In spite of vigorous domestic development most recently in the Tarim Basin China is now consuming approximately 8 per cent of the world's oil output but producing only 4 per cent. China's emergence as an energy importer has given rise to concerns that it is a major contributor to recent turmoil in energy markets. This book examines China's record of oil and gas development, its refining capacity, and energy prospects. The authors conclude that there are no fundamental reasons for anxiety about China's demands on the world energy economy, but they emphasize that its energy future will depend critically on a continuation of reform and internationalization. China and the Global Energy Crisis begins with a thorough examination of the status quo of China's oil and natural gas industry. It explores the evolution, transition, and characteristics of the oil industry of China, and unravels the problems that caused ineffectiveness of these industries for energy resources. China, Oil and Global Politics - Philip Andrews-Speed - 2011-05-12
China's rapid economic growth has led to a huge increase in its domestic energy needs. This book provides a critical overview of how China's growing need for oil imports is shaping its international economic and diplomatic strategy and how this affects global political relations and behaviour. Part One is focused on the domestic drivers of energy policy: it provides a systematic account of recent trends in China's energy sector and assesses the context and processes of energy policy making, and concludes by showing how and why China's oil industry has spread across the world in the last fifteen years. Part Two analyses the political and foreign policy implications of this energy-driven expansion and the challenges this potentially poses for China's integration into the international system. It examines a number of factors linked to this integration in the energy field, including the unpredictabilities of internal policymaking; China's determination to promote its own critical national interests, and the general ambition of the Chinese leadership to integrate with the international system on its own terms and at its own speed. The highly topical book draws together the various dimensions of China's international energy strategy, and provides insights into the impact of this on China's growing international presence in various parts of the world.

India and China in Africa - Raj Verma - 2016-12-19
With their phenomenal growth rates, India and China are surging ahead as world economic powers. Due to increasing instability in the Middle East, they have turned to Africa to procure oil to fuel their industrialisation process. Africa's economy stands to be impacted in various ways due to the increasing interaction with these 'Asian Giants'. This book analyses the acquisition of oil blocks by Indian and Chinese oil corporations in eleven West African countries. It describes the differences in how India and China mobilise oil externally to meet their respective goals and objectives. The book examines the rate of return on capital, rate of interest on loans and the ease of availability of loans, the difference in the level of technology and ability to acquire technology, project management skills, risk aversion, valuation of the asset and the difference in the economic, political and diplomatic support received by the Chinese and Indian oil companies from their respective governments. It is argued that the difference in the relative economic and political power of India and China accounts for the ability of Chinese oil companies to outbid their Indian competitors and/or be preferred as partners by international oil companies. Containing interviews from Indian and Chinese oil company executives, government officials, industry officials, former diplomats and scholars and academics from India, China and the UK, this book makes a valuable contribution to existing literature on India, China and the oil industry in West Africa. It will be a valuable resource for academics in the field of International Relations, Foreign Policy Analysis, Asian Business and Economics.

China's Oil Future - Randall W. Hardy - 2019-03-13
Much has been written recently about China's emergence as a potential oil power. Comparisons have ranged from those that picture China as another Middle East, with a Middle East-like impact on future global oil markets, to more modest images of an oil-producing nation that can meet its rapidly expanding internal needs through the late 1980s and still have some oil for export to its neighbor, Japan. Yet to fulfill even the latter prediction, the People's Republic of China will have to surmount a series of substantial political and technical obstacles. This book identifies those constraints, assesses the likelihood of China's overcoming them, examines the incentives for increasing Chinese petroleum exports, and analyzes the role such exports could play in Peking's foreign policy.

Recently China’s focus has shifted to Europe as well as the United States, and to new fields as diverse as real estate, energy, hospitality, transportation, and heavy industry.
Chinese foreign investment is expected to grow throughout Europe in the years to come. For instance, the financial crisis centered in Greece and the fall of the euro have helped China and some of its corporations create a new partnership within the European Union, working to expand the country’s power through finance and infrastructure. China’s Offensive in Europe studies the trends, sectors, and target countries of Chinese investments in Europe. It looks at cases of outbound investment trajectories and journeys by some key Chinese private and state-owned companies. It also takes a look at European perceptions of China, a country with a very different history and very different traditions from the Western world. Philippe Le Corre and Alain Sepulchre examine how China’s presence in Europe can serve as a benchmark to other developed economies—especially the United States, which is also seeing a rise in Chinese investments.
