Regionalism and Uneven Development in Southern Africa - Fredrik Söderbaum - 2018-05-08
This title was first published in 2003. This volume advances our understanding of how Southern Africa is currently being reconfigured, critically examining what has been marketed as the "flagship" of the Spatial Development Initiative programme in Southern Africa: the Maputo Development Corridor (MDC). By examining a variety of cross-cutting levels of governance and development and by focusing on the nexus between the formal and informal processes that stake out the MDC, this volume contributes to a detailed understanding of what is perhaps the most important current experiment in regionalism in Africa. By engaging regional processes on the micro-level and "on the ground", there is a special emphasis on how local communities regard and respond to the Corridor initiative. All chapters in the volume are the result of extensive fieldwork in both Mozambique and South Africa, and the contributions are drawn from the region and beyond, including Botswana, Mozambique, Zimbabwe, South Africa, Sweden and the United States.

The Political Economy of Regionalism: The Case of Southern Africa challenges prevailing wisdom, showing how ruling political elites and 'big business' join forces with certain external actors in order to promote market integration and economic globalization, boost regimes, and to satisfy group-specific and even personal interests. Only rarely do these forms of regionalism contribute to the poor and disadvantaged, who instead opt out, and survive through informal economic regionalisms or seek to create regionalisms rooted in civil society.

The Political Economy of Regionalism - F. Söderbaum - 2004-10-29

The turn of the last century, amid the excesses of the Gilded Age, variety became a key notion for Americans' a sign of national progress and development, reassurance that the modern nation would not fall into monotonous dullness or disorderly chaos. Carrie Tirado Bramen pursues this idea through the works of a wide range of regional and cosmopolitan writers, journalists, theologians, and politicians who rewrote the narrative of American exceptionalism through a celebration of variety. Exploring cultural and institutional spheres ranging from intra-urban walking tours in popular magazines to the 1893 World's Parliament of Religions in Chicago, she shows how the rhetoric of variety became naturalized and nationalized as quintessentially American.

editor of These 'Colored' United States: African American Essays from the 1920s Carrie Bramen offers a compelling, intellectually rigorous history of the protean idea of pluralism, a concept that has been embraced heartily by both liberals and conservatives as essential in defining American identity. Situating pluralism in philosophical, psychological, aesthetic, and political contexts, Bramen brings a fresh perspective to illuminating the meaning of the term for late Victorian America and, significantly, its legacy for us today. --Linda Simon, author of Genuine Reality: A Life of William James Taking William James's 'pluralistic universe' as a starting point, The Uses of Variety takes us through regions, ghettos, religious congresses, and a range of theoretical, philosophical, and literary works to explore the multiple and often conflicting constructions of 'variety' in the context of turn-of-the-century U.S. nationalism and cosmopolitanism. Carrie Tirado Bramen brings together a broad spectrum of historical events and cultural theories in which variety variously expressed, contained, and shaped an increasing diversity that was perceived as threatening national coherence. This insightful, thoroughly researched, and timely work will be indispensable for scholars interested in U.S. nationalism, modernism, cosmopolitanism, and multiculturalism. --Priscilla Wald, author of Constituting Americans: Cultural Anxiety and Narrative Form

Regionalism, Development and the Post-Commodities Boom in South America - Ernesto Vivares - 2017-11-24
This book is a critical and multidisciplinary IPE of the unequal structures of South American development and uneven insertions in the global order following the decline of the commodities boom. The work explores the extent to which regional development issues are related to
ideological and institutional logics that have the resilience of the historical structures within an unequal world order. Thus, the authors seek first to analytically explore the regional issues beyond the formal limitations of North American and Eurocentric approaches. Secondly, they empirically scrutinize the complex dimensions of regional inequality and global insertions. Aspects analysed include economic reprimarization, the impact of China, development finance, trade and regional value chains, knowledge and technology, regional and transnational organised crime, cities, economic integration and the Global South.

**The Evolution of Regional Uneven Development in Jiangsu Province Under China’s Growth-Oriented State Ideology** - Shutian Huang - 2016-01-14
This book explores and evaluates the evolution of regional (uneven) development in Jiangsu province in China, during the economic reform that began in the late 1970s and continues to the present day. Using detailed case studies, it clarifies and deciphers a number of fundamental ideological and institutional logics that have decisively shaped or guided China’s 30-year economic reform. The book provides an example of how the traditional struggles with the modern, how the domestic interacts with the global, and how the local/regional scale coordinates and conflicts with the central in the context of China’s economic reform. Taken together, it reveals how institutions, forces and actors interconnect and co-evolve in a dynamic and relational fashion within specific spatiotemporal horizons. Of particular interest in the research presented here is the way that the empirical material enables the four dimensions of territory, place, scale and network to be explored within the context of contemporary China. It is shown how the economic and social development of different territories and places within Jiangsu province is ‘relationally intertwined’ with sets of political and economic forces operating at different scales and within wider networks. As such, this book provides a detailed understanding of the spatiotemporal dynamics of uneven regional development in China, and sets out a number of salient policy implications drawn from the research findings.

Regional Disparity In Sub-saharan Africa - Assefa Mehretu - 2019-06-04
This book is an outcome of research on African development from the standpoint of economic geography which I have been undertaking over the last four years. The initial impetus for the research was a social science grant from the Rockefeller Foundation which enabled me to write most of the preliminary draft of the book during a sabbatical in 1984/85 which I spent at the University of Zimbabwe as Visiting Professor of Geography. A good deal of the latter part of the book was written in September of 1985 at the Rockefeller Foundation Study and Conference Center in Bellagio, Italy, where I spent three weeks as a member of the Reflections on Development Fellows of the Foundation from Africa and Asia.

The Rise of the English Regions? - Irene Hardill - 2006-10-03
This book analyzes devolution as it affects the English Regions, working from the perspective of uneven development, and drawing on the rich tradition of regional geography. Currently, London is the power centre ruling over the other English regions. The first part of the book looks at how this regional structure has arisen, and the theories that can be used to analyze it. The contributors discuss the nature of regional problems and governance, the institutions involved in regional governance and regional approaches to economic development. The second part of the book devotes a chapter to each English region, examining each region’s unique characteristics, and the opportunities created for it by devolution. By looking carefully at the regions, this part of the book sheds light on the question of whether Regional governance benefits the regions, or simply rescales governance to introduce another layer of bureaucracy.
as a central scale of action in the global economy. At the core of the book are case studies of two industries that rely on skilled, innovative, and flexible workers - the optics and imaging industry and the film and television industry. Combined with this is a discussion of the regions that constitute their production centers. The authors’ intensive research on photonics and entertainment media firms, both large and small, leads them to question some basic assumptions behind the new regionalism and to develop an alternative framework for understanding regional economic development policy. Finally, there is a re-examination of what the regional question means for the concept of the learning region. This book draws on the rich contemporary literature on the region but also addresses theoretical questions that preceded "the new regionalism." It will contribute to teaching and research in a range of social science disciplines.

**Remaking Regional Economies** - Susan Christopherson - 2007-09-26
Since the early 1980s, the region has been central to thinking about the emerging character of the global economy. In fields as diverse as business management, industrial relations, economic geography, sociology, and planning, the regional scale has emerged as an organizing concept for interpretations of economic change. This book is both a critique of the "new regionalism" and a return to the "regional question," including all of its concerns with equity and uneven development. It will challenge researchers and students to consider the region as a central scale of action in the global economy. Uneven Development in the Third World - A. Bhalla - 1996-11-27
The book defines uneven development in terms of development strategies and their outcomes. Drawing on case-studies from China and India, three types of strategy are discussed: heavy industrialisation, sectoral/regional balance, and economic liberalisation. Also three kinds of outcomes are examined: growth of output and productivity, income, consumption and class inequalities in three spatial dimensions - intra-regional, inter-regional and rural-urban. Furthermore, access to and utilisation of technology, health and educational services are compared.

Regional and Local Development in Times of Polarisation - Thilo Lang - 2019-01-23
Despite the emphasis of the European Regional Policy on territorial cohesion, regional disparities have been increasing within Europe in the past years. The metropolitan areas in almost all countries are considerably growing while regions outside of agglomerations are stagnating or even declining. Against this background this book aims to provide an understanding of the underlying processes of polarisation and related regional and local policies. This open access volume contributes to the debates about polarisation and regional development by focussing on questions of spatial justice, power distribution and policy transfer. Theoretical and empirically grounded contributions show that European policies are indeed reproducing socio-spatial inequalities instead of challenging them. The book shows further the existing potentials and limits of individuals, economic, political and civil society actors to respond to polarisation on the regional and local level. In this book conceptual thoughts on polarisation, regional policy and regional development are combined with empirical research and resulting implications for policymaking. As such, it is a valuable source for early career students and researchers as well as professionals in the field of regional and economic development, policy consultants, and policy makers.

Urban Sustainability through Smart Growth - Yonn Dierwechter - 2017-02-24
This book investigates the new urban geographies of “smart” metropolitan regionalism across the Greater Seattle area and examines the relationship between smart growth planning strategies and spaces of work, home, and mobility. The book specifically explores Seattle within the wider space-economy and multi-scaled policy regime of the Puget Sound region as a whole, ‘jumping up’ from questions of city politics to concerns with what the book interprets as the “intercurrence” of city-regional “ordering.” These theoretical terms capture the state-progressive effort to promote smarter forms of regional development but also the societal/institutional tensions and outright contradictions that such urban development invariably entails, particularly around problems of social equity. Key organizing themes in the text include: the historical path-dependencies of uneven economic and social development, particularly between Tacoma-Pierce County and Seattle-King County; current patterns of high-wage, medium-wage, and low-wage jobs; the emerging spatial and social structure of recent residential changes, especially with respect to class and race composition; and, finally, transit trends and new urban spaces associated with policy efforts to mitigate highway congestion and car-dependency. Greater Seattle, then, is mapped as a key US urban region inscribed spatially by the uneven search for a more sustainable order. Historically-sensitive, theoretically-informed and empirically topical, this book is of interest to scholars and students at all levels in regional planning, urban geography, political science, sustainability studies, urban sociology and public policy.

Sovereignty in the South - Brooke N. Coe - 2019-10-31
As international organisations gain greater power to monitor and manage the domestic affairs of their member states, the relationship between state sovereignty and international intervention becomes increasingly fraught. This book examines international rule-making in the Global South, tracing how the status of state sovereignty has evolved since decolonization. Coe argues that regional organizations flout the former norm of non-interference, becoming involved in the domestic affairs of their member states in Africa, Latin America, and (to a much lesser extent) Southeast Asia. In the name of democracy, human rights, and security, regional organizations increasingly assume jurisdiction over once off-limits domestic matters: they monitor elections and human rights and they

As international organisations gain greater power to monitor and manage the domestic affairs of their member states, the relationship between state sovereignty and international intervention becomes increasingly fraught. This book examines international rule-making in the Global South, tracing how the status of state sovereignty has evolved since decolonization. Coe argues that regional organizations flout the former norm of non-interference, becoming involved in the domestic affairs of their member states in Africa, Latin America, and (to a much lesser extent) Southeast Asia. In the name of democracy, human rights, and security, regional organizations increasingly assume jurisdiction over once off-limits domestic matters: they monitor elections and human rights and they respond to intrastate crises with mediation, fact-finding and sanctions. Coe explores the effects of democratization and economic crisis on regional institutions to explain the uneven development of 'intrusive regionalism' across the postcolonial world.

Introduction to Economic Geography - Danny MacKinnon - 2014-05-22
Today’s rapidly flowing global economy, hit by recession following the financial crisis of 2008/9, means the geographical economic perspective has never been more important. An Introduction to Economic Geography comprehensively guides you through the core issues and debates of this vibrant and exciting area, whilst also exploring the range of approaches and paradigms currently invigorating the wider discipline. Rigorous and accessible, the authors demystify and enliven a crucial subject for geographical study. Underpinned by the themes of globalisation, uneven development and place, the text explores the diversity and vitality of contemporary economic geography. It balances coverage of 'traditional' areas such as regional development and labour markets with insight into new and evolving topics like neoliberalism, consumption, creativity and alternative economic practices. An Introduction to Economic Geography is an essential textbook for undergraduate students taking courses in Economic Geography, Globalisation Studies and more broadly in Human Geography. It will also be of key interest to anyone in Planning, Business and Management Studies and Economics.

Local and Regional Development - Andy Pike - 2006-11-22

Local and regional development is an increasingly global issue. For localities and regions, the challenge of enhancing prosperity, improving wellbeing and increasing living standards has become acute for localities and regions formerly considered discrete parts of the 'developed' and 'developing' worlds. Amid concern over the definitions and sustainability of 'development', a spectre has emerged of deepened unevenness and sharpened inequalities in the development prospects for particular social groups and territories. Local and Regional Development engages and addresses the key questions: what are the principles and values that shape definitions and strategies of local and regional development? What are the conceptual and theoretical frameworks capable of understanding and interpreting local and regional development? What are the main policy interventions and instruments? How do localities and regions attempt to effect development in practice? What kinds of local and regional development should we be pursuing? This book addresses the fundamental issues of 'what kind of local and regional development and for whom?', frameworks of understanding, and instruments and policies. It outlines what a holistic, progressive and sustainable local and regional development might constitute before reflecting on its limits and political renewal. With the growing international importance of local and regional development, this book is an essential student purchase, illustrated throughout with maps, figures and case studies from Asia, Europe, and Central and North America.

Uneven Human Capital Development in Contemporary China - Fang Su - 2011
Regional inequality is one of the most challenging issues facing China in the coming decade. Whilst this matter can be approached from different angles; mainstream scholars have tended to examine this issue by way of monetary measurement (e.g. GDP or income per capita). This study draws attention to the non-monetary aspect in order to shed new light on regional inequality. Accordingly, this research focuses on the gaps and trends of human capital development, a key non-monetary index proxying for regional inequality in transitional China. Taking education and health status as two key indicators, in particular, this research aims to trace the trends in regional inequality over the last two decades, investigate to what extent those two dimensions can help to identify and integrate factors behind regional disparities, and to analyse some profound policies and implications. Based upon official educational and health status statistics at provincial level, this study develops a model to exam regional disparity between the three economic development zones from 1990 to 2005. Main findings are that different perspectives of regional inequality bring out different consequences; from the viewpoint of human capital development, regional inequality presents positive findings in uneven development. Secondly, causes of development are fairly diverse and different measurements may significantly vary outcomes. Thirdly, uneven development is a spontaneous phenomenon underlying development, which over varying lengths of time may have stimulated economic growth in a positive way. Finally, limitations are discussed associated with policy implications.
