**Advances in Visual Methodology** - Sarah Pink - 2012-05-17
A stunning collection of cutting-edge essays which brings together the leading scholars in visual research. Clearly structured, and written in an engaging and accessible style throughout, this invigorating work will be the 'must have' text for teachers and students of 'the visual' across the arts, humanities and social sciences. - Elaine Campbell, Reader in Criminology, Newcastle University This is a book about research that takes the challenge of the internet seriously, that rises above disciplinary difference and points to new directions for social research. - Rob Walker,
This innovative book examines and introduces cutting edge visual methods in social research. It explores the development of visual methodology as a field of interdisciplinary and post-disciplinary practice spanning scholarly and applied concerns. Positioned at the innovative edge of theory and practice in contemporary visual research, Pink's engaging book goes beyond the methods, ideas and fields of practice outlined in existing texts and handbooks. This book examines: -How new theoretical and methodological engagements are developing and emerging in research practice; -the impact new approaches are having on the types of knowledge visual research produces and critiques; -the ways visual research intersects with new media; -and the implications for social and cultural research, scholarship and intervention. This book will be essential reading for any student or researcher thinking of using visual methods in their own research. Sarah Pink is Professor of Social Sciences at Loughborough University.

Visual research methods (VRM) comprise a collection of methods that incorporate visual elements such as maps, drawings, photographs, videos, as well as three-dimensional objects into photo-elicitation, photovoice, draw-and-write techniques, and cognitive mapping are being leveraged to great effect to explore information experiences to investigate some of the central questions in the field; expand theoretical discussions in LIS; and improve library services and spaces. Visual Research Methods: An Introduction for Library and Information Studies is the first book to focus on visual methods in LIS, providing a comprehensive primer for students, educators, researchers and practitioners in the field. Contributed chapters in the book showcase examples of VRM in action and offer the insights, inspirations, and experiences of researchers and practitioners working with visual methods. Coverage includes: - an introduction to visual research methods including a discussion of terminology - an overview of the literature on VRM in libraries - methodological framing including a discussion of theory, epistemology, - practical and ethical
Considerations for researchers embarking on VRM projects - chapters showcasing VRM in action including drawing techniques, photographic techniques, and mixed methods - six contributed chapters each showcasing the results of visual research methods, discussions of the techniques, and reflections on VRM for research in information studies. **An Introduction to Visual Research Methods in Tourism** - Tijana Rakić - 2011-08-01
"An Introduction to Visual Research Methods in Tourism", is the first book to present, discuss and promote the use of a range of visual methods, including still images (such as photographs, postcards, drawings) and moving images (such as video) within the context of tourism research. Students, researchers and academics actively doing visual tourism research or those who are contemplating using these methods. These range from the questions surrounding philosophical approaches, (inter)disciplinary location, range and choice of methods, implementation and data analysis techniques to provide an essential guide to using visual methods in tourism research. While recognising that visual methods are predominantly employed within qualitative research, this text will discuss various philosophical approaches and academic disciplines indicating how these influence a particular choice of visual method, mode of implementation and type of analysis. In this regard this book will incorporate perspectives from a range of disciplines including anthropology, geography and sociology, demonstrating how these might be applied within the context of studies in tourism. This book demonstrates how data from participatory visual methods can take people and communities beyond ideological engagement, initiating new conversations and changing perspectives, policy debates, and policy development. These methods include, for example, photo-voice, participatory video, drawing/mapping, and digital storytelling. Organised around a series of tools that have been used across health, education, environmental, and sociological research, Participatory Visual Methodologies illustrates how to maintain participant engagement in decision-making, navigate critical issues around ethics, track longitudinal studies. Tools discussed include: Pedagogical screenings Digital dialogue devices Upcycling and ‘speaking back’ interventions Participant-led policy briefs An authoritative and accessible guide to how participatory visual methods and arts-based methods can influence social change, this book will help any postgraduate researcher looking to contribute to policy dialogue.

**Visual, Narrative and Creative Research Methods** - Dawn Mannay - 2015-10-23
Visual research methods are quickly becoming key topics of interest and are now widely recognised as having the potential to evoke emphatic understanding of the ways in which other people experience their worlds. Visual, Narrative and Creative Research Methods approaches as a qualitative tool in the field of social science and related disciplines. This book is concerned with the process of applying visual methods as a tool of inquiry from design, to production, to analysis and dissemination. Drawing on research projects which reflect real world situations, you will be methodically guided through the research process in detail, enabling you to examine and understand the practices and value of visual, narrative and creative approaches as effective qualitative tools. Key topics include: techniques of data production, including collage, mapping, drawing and photographs; the practicalities of application; the positioning of the researcher; interpretation of visual data; images and narratives in public spaces; evaluative analysis of creative approaches. Visual, Narrative and Creative Research Methods will be an invaluable companion for researchers, postgraduate students and other academics with an interest in

This book explores the set of theoretical, methodological, as well as ethical and analytical issues that shape the ways in which visual qualitative research is conducted in psychology. Using a variety of forms of visual data, including photography, documentary film-making, drawing, internet media, model making and collages, each author endeavors to broaden the scope for understanding experience and subjectivity, using visual qualitative methods. The contributors to this volume work within a variety of traditions including narrative psychology, personal construct theory, discursive psychology and conversation analysis, phenomenology and psychoanalysis. Each addresses how a particular visual approach has contributed to existing social and psychological theory in their topic area, and clearly outline how they carried out their specific research project. The contributors draw on qualitative sources of verbal data, such as spoken interview, diaries and naturalistic conversation.

This comprehensive volume provides an unprecedented illustration of the potential for combining methods in order to create new multi-modal methodologies, and it presents and analyses these with psychology specific questions in mind. The range of topics covered includes sexuality, identity, group processes, child development, forensic psychology, race, and gender, making this volume a vital contribution to psychology, sociology and gender studies.

There has been an explosion of interest in visual culture - coming largely from work in sociology, anthropology and cultural studies and while there are a number of practical and technical manuals available for film, photographic and other visual media, there is a dearth of writing that combines both the practical and the technical. This book redresses this with a balanced approach that is written primarily for students in the social sciences who wish to use visual materials in the course of empirical, qualitative field research. It should also be of interest to experienced researchers who wish to expand their methodological approaches.

**Visual Methodology in Migration Studies** - Karolina Nikielska-Sekula - 2021-07-29
This open access book explores the use of visual methods in migration studies through a combination of theoretical analyses and empirical studies. The first section looks at how various visual methods, including photography, film, and mental maps, may be used to analyse the spatial presence of migrants. The second section addresses the processual building of narratives around migration, thereby using formats such as film and visual essay, and reflecting upon the ways they become carriers and mediators of both story and theory within the subject of migration. Section three focuses on vulnerable communities and discusses how visual methods can empower these communities, thereby also focusing on the theoretical and ethical implications of migration. The fourth section addresses the issue of migrant representation in visual discourses. Based on these contributions, a concluding methodological chapter systematizes the use of visual methods in migration studies across disciplines, with regard to their empirical, theoretical, and ethical implications. Multidisciplinary in character, this book is an interesting read for students and migration scholars who engage with visual methodologies, as well as practitioners,

Thinking Visually is the first text to present a
concise overview of the significant ethical,
theoretical, and practical considerations for
conducting research with images. The capacity to
take photos and video on handheld devices and
the ability to store, post, and share such imagery
online all offer tremendous opportunities for
social research. The rapid development and
popularity of such technology means that little
technological proficiency is required, and even
less theoretical and ethical consideration. This
book provides an accessible introduction to doing
visual research in the social sciences. Beginning
with ethical considerations, this book highlights
engaging in visual research. Further themes
involve creating, organizing, and using images
and are presented so as to help readers think
about and work with their own visual data. Boxed

This book provides an accessible introduction to doing visual research in the social sciences. Beginning with ethical considerations, this book highlights the importance of thinking visually before engaging in visual research. Further themes involve creating, organizing, and using images and are presented so as to help readers think about and work with their own visual data. Boxed case studies and further reading suggestions enhance the utility of this primer. Concise and highly focused, Visual Research will be an invaluable resource for visual, media, and communications students and researchers and others interested in visual research in the social sciences.

**Visual Research Methods in the Social Sciences** - Stephen Spencer - 2010-12-17
Visual Research Methods is a guide for students, who wish to explore and actively use a visual dimension in their research. This book offers an integrated approach to doing visual research, showing the potential for building convincing case studies using a mix of visual forms including: archive images, media, maps, objects, buildings, and video interviews. Examples of the visual construction of ‘place’, social identity and trends of analysis are given in the first section of the book, whilst the essays in the second section highlight the astonishing creativity and innovation of four visual researchers. Each detailed example serves as a touchstone of quality and analysis in research, with themes ranging from the ethnography of a Venezuelan cult goddess to the forensic photography of the skeleton of a fourteenth-century nobleman. They give a keen sense of the motives, philosophies and benefits of using visual research methods. This volume will be of practical interest to those embarking on visual research as well as more

Participatory Visual Methodologies in Global Public Health focuses on the use of participatory visual methodologies such as photovoice, participatory video (including cellphilming or the use of cell phones to make videos), drawing and mapping in public health research. These approaches are modes of inquiry that can engage participants and communities, eliciting evidence about their own health and well-being, as well as modes of representation and modes of production in the co-creation of knowledge, and modes of dissemination in relation to knowledge translation and mobilization. Thus, the production by a group of girls or young women of a set of photos or videos from their own visual perspective can offer new evidence on how, for example, they see sexual violence. Unlike other data such as those collected through surveys or even conventional interviews, the images they have produced not only inform the empirical laboratory or the office of a researcher. They can, through exhibitions and screenings, reach various audiences: school or health personnel, parents and community members, and perhaps also policy-makers. This collection offers a critical overview for students, practitioners, researchers and policy-makers working in or concerned with the use of participatory methodologies in public health around the globe. This book was originally published as a special issue of Global Public Health.

Picturing Research - Linda Theron - 2012-01-01

Picturing research: drawing as visual methodology offers a timely analysis of the use of drawings in qualitative research. Drawing can be a method in itself, as in the research area of Visual Studies, and also one that complements the use of photography, video, and other visual methodologies. This edited volume is divided into two sections. The first section provides critical commentary on the use of drawings in social science research, addressing such issues of methodology as the politics of working with children and drawing, ethical issues in working with both adults and children, and some of the interpretive considerations. The second section, in its presentation of nine research-based case-studies, illustrates the richness of drawings. Each case study explores participatory research involving drawings that encourages social change, or illustrates participant resilience.

The book draws on community-based research from a wide variety of contexts, most in South Africa, although it also includes work from Rwanda and Lesotho. Given the high rates of HIV&AIDS in sub-Saharan Africa, it should not be surprising that many of the chapters take up concerns such as the preparation of teachers and community health workers in the age of AIDS, and the experiences of orphans and vulnerable children. Moving further afield, this book also includes work done with immigrant populations in Canada, and with tribunals in Somalia and Australia. Picturing research is an important resource for novice and experienced researchers interested in employing qualitative methodology that encourages rich (yet low-tech) visible data and that offers a participatory, enabling experience for participants and their communities.

to the use of still or moving images either as forms of data, to explore research topics and explorations of artistic practice. In addition to well-established visual methods, such as photo-voice and photo-elicitation, the possibilities for visual methods are flourishing through the proliferation of visual culture and developments in digital technologies. Methodological and ethical issues are emerging as visual methods are adapted and applied to answer new kinds of research questions, and in varied settings and populations. Authors offer practical and thoughtful discussions of emerging methodological and ethical dilemmas they encountered in innovative projects that used visual methods either in combination with other methods or as a stand-alone method. The discussions will be of interest to those seeking to understand the value, and potential ethical risks, of visual methodologies for social research.

**An Introduction to Grounded Methodology for Emerging Educational Researchers** - Simon Hayhoe - 2020-10-02
Introducing the reader to grounded methodology and its ethical approach, this book explores the theory behind the method as well as how to use it to develop and evaluate learning and education projects. Grounded methodology is designed to challenge traditional educational research methodologies, and in doing so questions the notion of the need for highly formal research in institutional settings. In this respect, it is also a simple way of planning an educational project that needs an evaluative element. Covering data collection techniques used in the course of education research such as observations, interviews, course development, participant diaries and online data collection, this book investigates the practical realities of researching in education contexts and the differences in

Covering data collection techniques used in the course of education research such as observations, interviews, course development, participant diaries and online data collection, this book investigates the practical realities of researching in education contexts and the differences in educational, national and cultural backgrounds. It is ideal reading for students and academics looking to update and increase their knowledge on grounded methodology, especially students who are researchers in final-year undergraduate or post-graduate level programs, or instructors planning to teach grounded theory or grounded methodology to their own emerging research students.

**Researching the Visual** - Michael Emmison - 2000-03-15

`The book has a solid practical feel to it, and although it deals philosophically with leading theorists such as Foucault, Goffman, Bourdieu and Hall it grounds the practice of visual research into everyday use. Weaved cleverly throughout are numerous practical exercises which draw together the theoretical concepts and give them a grounded rational element. This book is a valuable research tool and I would anticipate that many researchers will find it a worthwhile addition to their armoury.‘ - Mental Health Care

**Visual Research Methods in Architecture** - Igea Troiani - 2020-06-18
This book offers a distinctive approach to the use of visual methodologies for qualitative architectural research. It presents a diverse selection of ways for the architect or architectural researcher to use their gaze as part of visual literacy. Its contributors explore and use ‘critical visualizations’, which employ observation and sociocultural critique through visual creations - texts, drawings, diagrams, paintings, visual texts, photography, film and their hybrid forms - in order to research architecture, landscape design and interior architecture. The visual methods intersect with those used in ethnography, anthropology, visual culture and media studies. In presenting a range of interdisciplinary approaches, Visual Methodologies in Architectural Research opens up territory for new forms of visual architectural scholarship.

Participatory Visual and Digital Methods
Aline Gubrium - 2016-06-16
Gubrium and Harper describe how visual and digital methodologies can contribute to a participatory, public-engaged ethnography. These methods can change the traditional relationship between academic researchers and the community, building one that is more accessible, inclusive, and visually appealing, and one that encourages community members to reflect and engage in issues in their own communities. The authors describe how to use photovoice, film and video, digital storytelling, GIS, digital archives and exhibits in participatory contexts, and include numerous case studies demonstrating their utility around the world.

**Pedagogies, Physical Culture, and Visual Methods** - Laura Azzarito - 2013-02-11
To understand and more creatively capture the social world, visual methods have increasingly become used by researchers in the social sciences and education. However, despite the rapid development of visual-based knowledge, and despite the obvious links between human movement and visual forms of understanding, visual research has been scarce in the fields of physical culture and physical education pedagogy. This groundbreaking book is the first to mark a "visual turn" in understanding and researching physical culture and pedagogies, offering innovative, image-based research that reveals key issues in the domains of sport, health, and physical education studies.

Integrating visual research into physical culture and pedagogy studies, the book provides the and critically engaging with physical culture. Since human movement is increasingly created, established, and pedagogized beyond traditional educational sites such as schools, sport clubs, and fitness gyms, the book also explores the notion of visual pedagogy in wider physical culture, helping the reader to understand how visual-based technologies such as television, the internet, and mobile phones are central to people's engagement with physical culture today. The book demonstrates how the visual creates dynamic pedagogical tools for revealing playful forms of embodiment, and offers the reader a range of visual methods, from researcher-produced photo analysis to participatory-centred visual approaches, that will enhance their own study of physical culture. Pedagogies, Physical Culture and Visual Methods is important reading for all advanced students and researchers with an interest in human movement, physical education, physical culture, sport studies, and

The book introduces key terms and theories that underlie design research; examining the importance of visual grammar and design literacy, audience, communication theory and semiotics. Each chapter features case studies that demonstrate how the use of research methods can form the basis of effective visual communication and design problem solving, eschewing end product analysis for a discussion of the way research feeds into the design process. The third edition features new case studies in each chapter, updated design exercises and a new chapter on design-led tools and information design methods, in relation to both print and on-screen design.

Extending the discussion of critical content analysis to the visual realm of picturebooks and graphic novels, this book provides a clear research methodology for understanding and analyzing visual imagery. Offering strategies for "reading" illustrations in global and multicultural literature, chapter authors explore and bring together critical theory and social semiotics while demonstrating how visual analysis can be used to uncover and analyze power, ideologies, inequity, and resistance in picturebooks and graphic novels. This volume covers a diverse range of texts and types of books and offers tools and procedures for interpreting visual images to enhance the understandings of researchers, teachers, and students as they engage with the visual culture that fills our world. These methods are significant not only to becoming a critical reader of literature but to also becoming a critical reader of visual images in everyday life.

**Visual Criminology** - Johannes Wheeldon - 2021-09-30

This edited collection captures the expertise of scholars from the US, the UK, Australia, and Canada to catalog the rise in visual approaches in criminology. It presents examples of visual methods, uses, and approaches in criminology; assesses the potential for new graphic approaches to collect, analyze, and present data; and provides some analysis of the use of images in teaching, to spur social critique, and guide policy translation. The collection visually connects theory and practice by highlighting the work of criminologists who have embraced the visual turn. Contributors explore the use of cognitive maps, concept and mind maps, life history calendars, CCTV, life plots, GIS and hot spot research, policy graphs, visual abstracts and research summaries, and other visual tools in the context of criminology. Approaches building on discussion of developments in documentary photography and film, visual ethnography, and sensory phenomenology. The book is organized thematically, with each chapter following logically upon the last, introducing readers to a variety of visual approaches and their application in criminology. The goals of this collected volume are three-fold. The first is to highlight how the visual has been used in criminology historically to present data, contest meaning and complicate social control, and make more transparent the research process. The second is to work toward some sort of definitional consistency. While a worthy endeavor, this remains elusive given the assortment of uses and varying traditions from which visual criminology has emerged. The third is to try to think clearly about the role of humility. This means a willingness to acknowledge an epistemological framework and note the variety of limitations associated with trying to understand in deep and meaningful
approaches to collect, analyze, and present data; involves the recognition that part of the power of images (whatever their construction), comes from whether we think they are beautiful or whether and/or to what extent they disrupt our understanding in one way or another. This interdisciplinary book will be of interest to criminologists, sociologists, visual ethnographers, historians and those engaged with media studies. It is a valuable supplementary text for courses in introductory criminology and criminal justice, criminological theory, research methods, and other upper-level and senior capstone courses.
